

Head offices and Factory. Cornellà de Llobregat (Barcelona)

DF S.A. was created in 1988, as a result of the enthusiasm of a group of professionals in the electrical sector. From the first moment, **DF ELECTRIC**, has been characterised as dynamic and responsive to the needs of the market, with the vocation of supporting its clients throughout the world. By 1992 two events had already taken place that marked the rapid growth of **DF ELECTRIC**:

- The company's first exhibition at an electrical equipment trade fair (MATELEC'92),
- The installation of the first totally automated production line.

Both landmarks impelled the unusually fast evolution of **DF ELECTRIC**.

On the one hand, there was the commercial drive to be present in all markets that made **DF ELECTRIC** participate in more than 50 fairs on 5 continents, 85% of this participation being at trade fairs in export markets.

While on the other hand, there has been continuous investment of resources in the automation and modernization of production lines. This is what really sets **DF ELECTRIC** apart, since few companies of its size have developed its own manufacturing technology.

These two company characteristics, dynamic commercial expansion and strong investment in technology, transformed **DF ELECTRIC** into what it is today. Some key company indicators for 2004 are:

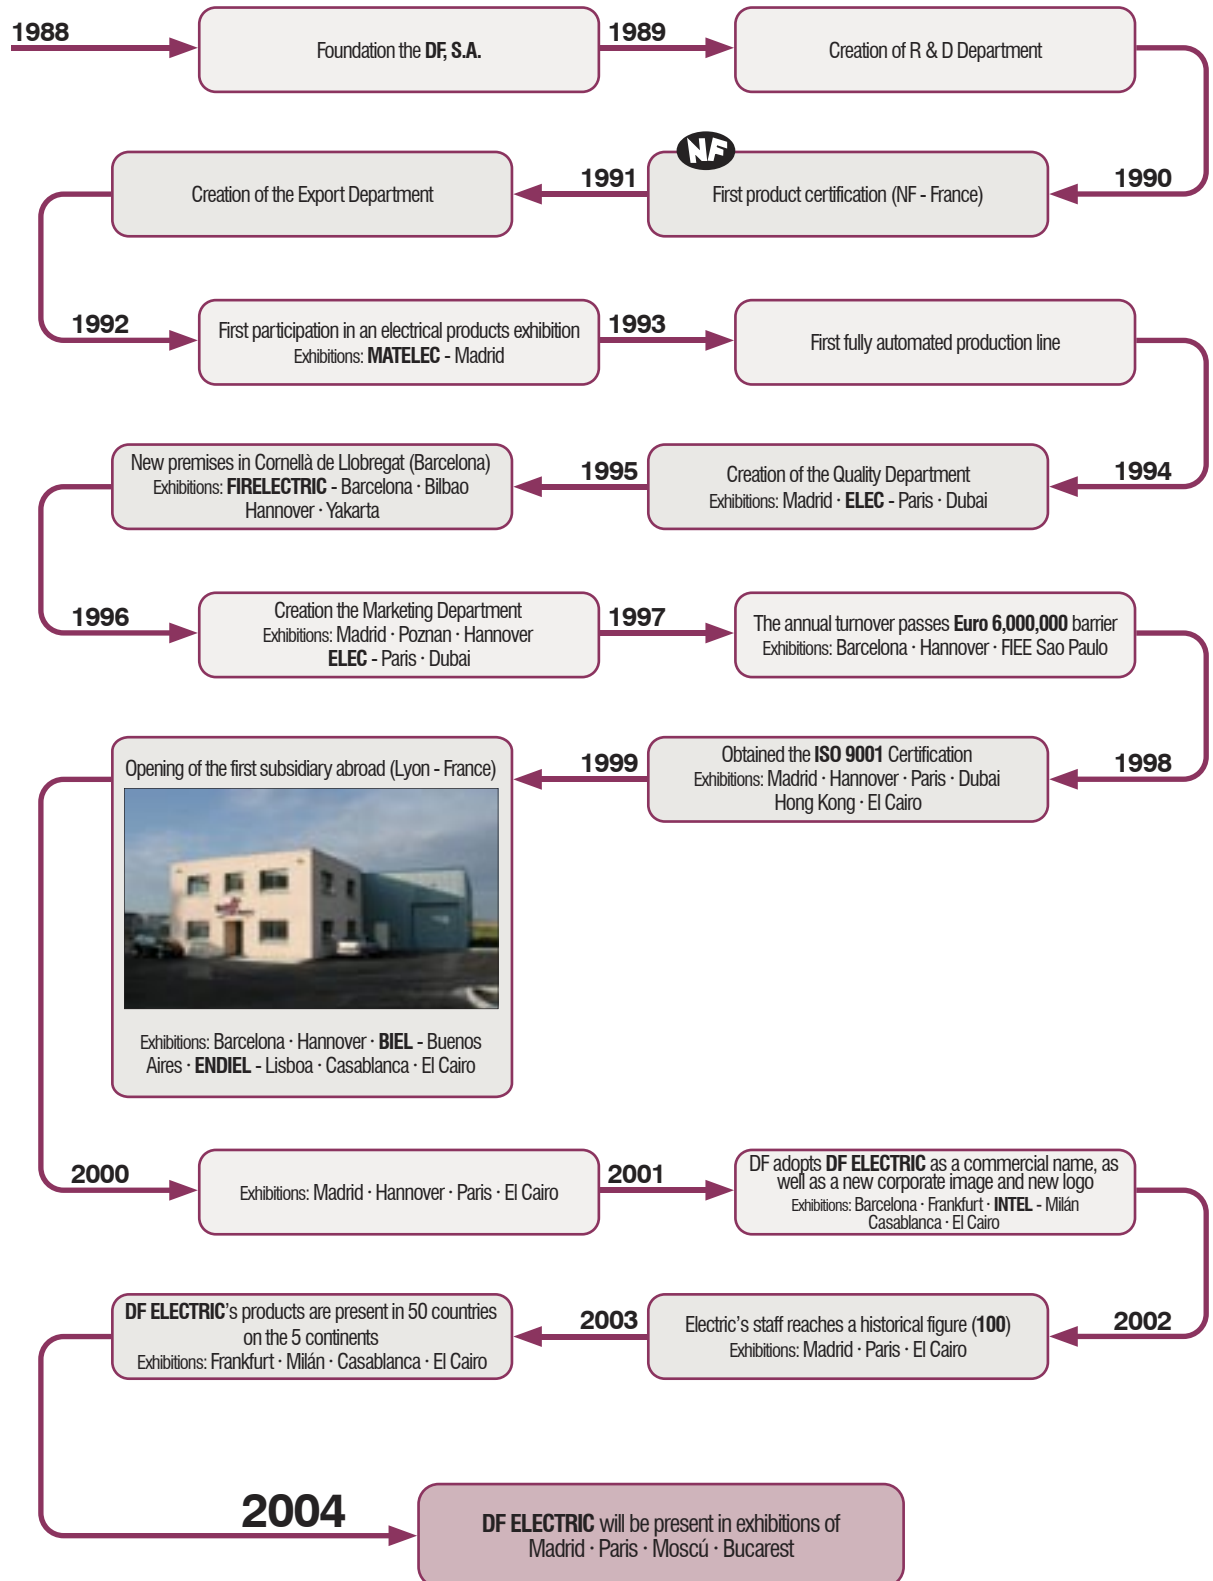

- Staff of more than **90 people**.
- Turnover of over **12 million Euros** (65% in export sales).
- Present in over **50 countries**.
- Catalogue with more than **4,000 references**.
- Investment in **R&D** approximately **8% of turnover**.
- Manufacture of more than **50 million units** per annum.
- Quality Control at **100%** of manufactured products.

History

Since its foundation, **DF ELECTRIC**'s main goal has been bringing together the confidence of our clients and suppliers with the motivation and the effort of the company's personnel.

16 years later we continue today totally committed to this living and dynamic project.

Quality

Our Quality Control Department takes the lead in the tracking and supervision of the whole complex production process and its design, to ensure compliance with Quality Manual certification according to ISO 9000:2000 regulations.

Adherence to the procedural manual provides the guidance to ensure that efficiency prevails in our warehouses, for raw materials as well as finished products, in spite of the continuous and frenetic activity.

Every day the orders are prepared for later dispatch to all corners of the planet using terrestrial, marine or aerial transport.
